

Short-Path Gas Cells – For Samples with Higher Vapor Phase Concentration

PIKE Technologies offers several choices for analysis of gas samples with component concentrations generally above 1% by weight. Our Short-Path HT Gas Cells provide high throughput by virtue of their greater inside diameter providing more energy at the FTIR detector. The Short-Path HT Gas Cells also include glass stopcocks for flow input of the gas sample and sealing.

The PIKE Technologies Short-Path EC Gas Cells are recommended for use with occasional gas sampling and offer an economical choice with standard septum-styled sealing of the vapor phase sample.

Both our Short-Path HT and EC Gas Cells are available in 50-mm and 100-mm versions. The complete gas cell requires your selection of the appropriate IR transparent windows. Both HT and EC Gas Cells are slide mount accessories, compatible with all FTIR spectrometers.

FEATURES

- Gas cells for measuring higher vapor phase concentration
- High throughput and economy versions
- 100-mm and 50-mm pathlengths
